

Brainstorming & Idea Prioritization

Project Name	Cosmetics Insights: Navigating Cosmetics Trends and Consumer Insights with Tableau
Team ID	XXXXXX
Date	7th July 2026

Ideation Phase Overview

Brainstorming provides a free and open environment that encourages everyone within a team to participate in the creative thinking process that leads to problem solving. Prioritizing volume over value, out-of-the-box ideas are welcome and built upon, helping the team develop a rich amount of creative data solutions.

STEP 1: DEFINE THE PROBLEM STATEMENT

To frame the scope of our analytics dashboard and insight generation, we define our objective via a structured **How Might We** framework.

PROBLEM STATEMENT

"How might we leverage Tableau to visualize changing cosmetics trends and consumer insights to empower brands to optimize their product positioning and marketing strategies?"

Key Rules of Brainstorming

To run a smooth, collaborative, and highly productive ideation session:

1. Stay on Topic Keep focus centered on the cosmetics market dynamic and Tableau visualization capabilities.	2. Defer Judgment Separate idea generation from evaluation; allow wild ideas to flow freely without initial critique.	3. Go for Volume Focus on generating a high quantity of distinct data angles, metrics, and chart ideas.
4. Encourage Wild Ideas	5. Listen to Others	6. Be Visual

Out-of-the-box data combinations or predictive features are highly welcome.

Build seamlessly on top of teammates' visualization concepts.

Imagine the end-user dashboard layout, filters, and interactivity as we list items.

STEP 2: BRAINSTORM, IDEA LISTING & GROUPING

The team generated a diverse range of features, data points, and visualization methodologies. These ideas have been categorized into functional clusters to bring structure to the dashboard development path.

Cluster A: Consumer Sentiment & Social Trends

A1. TikTok & Instagram Ingredient Scraping

Visualize the rise/fall of trendy ingredients (e.g., Niacinamide, Snail Mucin) over time using dynamic line charts.

A2. Influencer Impact Mapping

A scatter plot correlating specific influencer mentions with immediate spikes in retail checkout data.

A3. Clean Beauty Sentiment Gauges

Text analytics parsing customer reviews to map sentiment around "sustainability" and "cruelty-free" claims.

A4. Color Palette Trend Tracker

A visual color grid showing real-time seasonal preferences in lip and eye cosmetic shades across different regions.

Cluster B: Market Share & Competitor Benchmarking

B1. Dynamic Market Share Matrix

A Tableau Treemap illustrating brand size vs. quarterly growth rates across skin, hair, and makeup sectors.

B2. Price Elasticity Dashboard

Interactive cross-filtering to show how price changes affect sales volumes for luxury vs. drugstore cosmetic categories.

Cluster C: Advanced Analytics & Demand Forecasting

C1. Predictive Stockout Alerter

Integrating basic statistical forecasting inside Tableau to warn brands when a trending product faces inventory depletion.

C2. Customer Lifetime Value (CLV) Segments

Cohort analysis tracking repeat purchases based on initial product category entry.

STEP 3: IDEA PRIORITIZATION

To determine the immediate development roadmap, all brainstormed ideas were plotted onto a 2x2 matrix balancing **Importance to Business** against **Feasibility of Implementation**.

	High Feasibility (Easy to Implement)	Low Feasibility (Complex/Hard)
HIGH IMPORTANCE	★ Quick Wins (High Importance, High Feasibility) • B1. Dynamic Market Share Matrix: Standard retail data structures make this very straightforward to map into a treemap immediately. • A4. Color Palette Trend Tracker: Visualizing localized SKU sales data by hex colors using Tableau custom shapes.	♦ Strategic Bets (High Importance, Low Feasibility) • A1. TikTok & Instagram Scraping: Critically important for trend tracking, but requires complex web scraping pipelines and API compliance. • C1. Predictive Stockout Alerter: High value for supply chain, but demands robust forecasting models integrated via Tableau Analytics Extensions.

LOW IMPORTANCE	 Fill-Ins / Backlog (Low Importance, High Feasibility) • B2. Price Elasticity Dashboard: Simple calculation using historical parameters, but less critical for initial high-level macro trend navigation.	 Thankless Tasks (Low Importance, Low Feasibility) • A2. Influencer Impact Mapping: Highly complex attribution due to dark social sharing and lag times, with localized, fragmented returns. • C2. Customer Lifetime Value Segments: Requires highly granular multi-year longitudinal CRM datasets that are rarely standardized.
-----------------------	---	--

Strategic Action Plan & Next Steps

1. **Phase 1 (Immediate):** Implement the *Quick Wins*. Build the foundational dynamic Market Share Treemap and the SKU Color Palette Tracker using verified retail datasets.
2. **Phase 2 (Mid-term):** Scope the data engineering requirements for the *Strategic Bets*, focusing primarily on establishing a secure pipeline for social media sentiment metrics.
3. **Phase 3 (Long-term):** Archive the *Thankless Tasks* and revisit the backlog items only if explicit consumer-analytics request parameters shift.
