

PROJECT IDEATION & DISCOVERY ARTIFACTS

Project Name	Cosmetics Insights: Navigating Cosmetics Trends and Consumer Insights with Tableau		
Team ID	XXXXXX	Date	7th July 2026

1. Empathy Map Canvas

Target User: Cosmetics Marketing Analyst & Brand Strategy Specialist mapping seasonal cosmetic shifts.

WHAT DOES THE USER THINK AND FEEL?

- **Major Preoccupations:** Staying ahead of lightning-fast viral cosmetics trends before competitors exploit them.
- **Worries:** Missing critical market shifts on skincare ingredients or failing to capture true consumer sentiment.
- **Aspirations:** To build clean, reliable predictive dashboards that connect social media buzz seamlessly to supply chain demand.

WHAT DOES THE USER HEAR?

- **From Influencers:** Constant chatter about new skincare formulas, clean beauty, and ingredient-led routines on TikTok/Instagram.
- **From Executives:** "We need actionable trend forecasting models yesterday; reduce reliance on static PDFs."
- **From Peers:** Complaining about the messy process of cleaning raw unstructured beauty forum reviews.

WHAT DOES THE USER SEE?

- **Environment:** Fragmented tool landscapes (Google Trends, social listening software, disparate Excel spreadsheets).
- **The Market Offers:** High-cost standalone generic market research reports that lack granular brand-specific filtering.
- **Competitors:** Launching agile capsule collections based on real-time consumer aesthetic shifts.

WHAT DOES THE USER SAY AND DO?

- **Public Attitude:** Champions data-backed experimentation and advocates for automated retail analytics.
- **Behavior:** Manually merges giant CSV files from different cosmetic distribution channels every week.
- **Actions:** Continually builds ad-hoc dashboards, testing parameters to filter out short-term cosmetic noise from long-term sustainable trends.

PAIN (FEARS, FRUSTRATIONS, OBSTACLES)

- Extremely high effort required to structure text-heavy consumer reviews.
- Frustration with delayed data pipelines that turn "real-time" trends into stale updates.
- Inability to present complex statistical confidence intervals to stakeholders intuitively.

GAIN (WANTS, NEEDS, SUCCESS METRICS)

- An integrated Tableau ecosystem combining active market trends and internal sales metrics.
- Ability to slice consumer sentiment dynamics by demographic region instantly.
- Clear visual storytelling that accelerates product development approvals.

2. Defined Customer Problem Statements

Structuring core consumer challenges into standard actionable frames to align design priorities.

ID	I AM... (CUSTOMER PROFILE)	I'M TRYING TO... (GOAL/JOB)	BUT... (BARRIER/ PROBLEM)	BECAUSE... (ROOT CAUSE)	WHICH MAKES ME FEEL... (EMOTION)
PS-1	A Cosmetics Brand and Strategy Analyst specializing in market expansion.	Track and cross-reference trending formulation ingredients alongside regional sales data.	It takes hours of manual, repetitive scripting to align multi-format external spreadsheets.	Consumer trend data lives in isolated vertical silos completely detached from central Tableau reporting suites.	Anxious and Reactive about lagging behind competitor cycles.
PS-2	A Senior Product Developer in the clean cosmetics category.	Forecast which skincare macro trends will remain relevant over the next twelve months.	Short-lived viral aesthetics cloud long-term market interest metrics.	The company lacks interactive visualizations that cleanly filter short-term hype from durable market demands.	Overwhelmed by unstructured data noise.
