

PROBLEM-SOLUTION FIT CANVAS 2.0

Project: *Cosmetics Insights – Navigating Cosmetics Trends and Consumer Insights with Tableau*

TEAM ID: XXXXXX

DATE: 7th July 2026

FRAMEWORK: Amaltama 2.0

This document applies the structured **Problem-Solution Fit Canvas 2.0** model to evaluate how the data visualization framework *Cosmetics Insights* bridges the gap between fast-moving beauty industry trends and agile product/marketing decision-making.

1. CUSTOMER SEGMENT(S)

Primary Target Audience:

- Cosmetics Brand Managers & Product Developers
- Marketing Strategists & Trend Analysts in the Beauty Sector
- Retail Buyers and Merchandisers managing cosmetics portfolios

Core Focus: Professionals navigating high-velocity fashion and beauty macro/micro-trends who need immediate, reliable quantitative consumer feedback.

2. JOBS-TO-BE-DONE / PROBLEMS

Key Objectives & Challenges:

- Identifying shifting consumer preferences (e.g., clean beauty, vegan formulations, ingredient transparency) ahead of production cycles.
- Tracking multi-channel competitor strategy and dynamic visual engagement.
- Optimizing cosmetic inventory, marketing allocation, and supply chains based on volatile interest graphs.

3. TRIGGERS

What forces these segments to act?

- Sudden, unexpected drops in sales metrics for legacy core product lines.
- Overnight viral social media shifts (e.g., TikTok beauty hacks, ingredient controversies) completely altering demand.
- Preparation for major stakeholder alignment meetings and executive portfolio strategy calls.

9. PROBLEM ROOT CAUSE

The Real Reason the Problem Exists:

The modern beauty industry operates on rapid, social-media-driven hype cycles. Traditional market research agencies provide static, backward-looking quarterly PDF reports that are isolated, slow, and expensive—creating a fundamental misalignment with real-time digital consumer behavior.

5. AVAILABLE SOLUTIONS

Current Alternatives & Status Quo:

- **Static Research Subscriptions:** (Mintel, Euromonitor) Highly accurate but prohibitively slow and non-interactive.
- **Manual Scraping/Browsing:** Endless manual scrolling across social grids—highly subjective, unquantifiable, and prone to internal bias.
- **Raw Data Exports:** Complex spreadsheet dumps requiring extensive data cleaning and advanced internal analyst availability.

6. CUSTOMER CONSTRAINTS

Limiting Factors for Action:

- **Financial Constraints:** Sky-high subscription budgets required for traditional premium research suites.
- **Resource & Talent Lack:** Absence of dedicated data scientists or internal analytics tooling within mid-tier beauty houses.
- **Time Starvation:** Fast-paced retail deadlines leave no room for extensive manual data collation or report building.

7. BEHAVIOUR

What the customer actually does today:

- Spends significant working hours synthesizing informal qualitative insights from influencer comments.
- Utilizes basic standalone analytics counters (e.g., native Instagram Insights, isolated Google Trends charts).
- Relies heavily on historic seasonal baselines despite volatile shifts in consumer spending.

8. CHANNELS OF BEHAVIOUR

8.1 Online Channels

- Social Commerce Spaces (TikTok Shop, Instagram Shop)
- Industry Portals (CosmeticsDesign, Business of Fashion)

8.2 Offline Channels

- Global Beauty Conventions & Trade Exhibitions (e.g., Cosmoprof)
- Direct In-Store retail monitoring and physical shelf-space audits

4. EMOTIONS: BEFORE / AFTER

BEFORE:

Anxious, overwhelmed by disjointed data streams, insecure about long-term portfolio investment choices, and fundamentally reactive.

AFTER:

Confident, strategic, empowered by real-time validation, and ready to pioneer upcoming beauty market movements proactively.

10. YOUR SOLUTION

Cosmetics Insights with Tableau:

An interactive, dynamic dashboard infrastructure that cleanses and compiles social search volume, e-commerce performance indicators, and multi-channel sentiment metrics into accessible visual hierarchies. Gives beauty houses an instant strategic pulse on the market.
